MERROW FORLOH

## FROM OUR FOUNDERS CHARLIE MERROW & ANDY TECHMANSKI

In response to the Covid-19 crisis, Merrow has dedicated teams working tirelessly to scale production and quickly deliver product to improve health outcomes in communities around the Country.

With significant effort and investment we have created Merrow Medical, a division of the Merrow companies, est. 1838, and joint venture with outdoor manufacturer, Forloh. Merrow Medical has the unique ability to design, develop and manufacture technical products at scale in Massachusetts, and is a significant part of a dependable US supply chain for essential soft goods.

On our 6 acre campus in downtown Fall River we develop and manufacture systems for respiratory and body protection. Within our 300k sq. foot facility, we have fully developed rapid prototyping capabilities, soft good manufacturing at scale & workforce training.

With a focus on performance products, Merrow leads in the development of the next generation of technical soft goods, including medical equipment: designed to be lighter, more breathable and more protective for Providers, first receivers and first responders. In partnership with Forloh, design teams have been challenged to improve a category of product that is critical to Providers' comfort and safety; manufactured in Massachusetts with a US based raw materials supply chain.

We are proud of how effectively and well our teams have responded when called upon, and we're all certain that this work will support and protect our healthcare front lines as we navigate this crisis.

**SINCERELY,  
ANDY & CHARLIE**
